Subject: [External] Solar Panels

My name is Daniel Canada

My address :

My utility company is Dominion Energy

I lease my solar panels from Sunrun

They are rated at 85% of my electrical use

I thought that I would save 85% of the cost of electricity.

When that didn't happen I asked Sunrun what was going on. They referred me to my electric company. I watched my bill all summer long and noted that I had over 800 KWH surplus that Dominion Energy said they were paying me for in November.

When November came I couldn't see much of a difference. Looking closely at the bill I saw that Dominion Energy paid me about 3 cents for every KWH. I had to buy back those KWH over the winter when my solar output was the lowest (December - February) at more than 11 cents per KWH. This alone is an outrage! It cost Dominion Energy nothing to receive my solar power during the peak season in the SummerTime. To add another fee on top of what I am already paying would make owning Solar Panels a financial loss. I am retired and living on Social Security, so I could not absorb that added cost. I ask not only to deny any added fees to owners of Solar Panels, but to restructure Dominion Energy compensation to Solar Panel owners such that the compensation occurs in March. That would use up all my summer surplus and I would get the greatest value from my Solar Panels
